

Linux Laboratory

ENSC3130

Project 1

**Automated Linux/Unix Command
Manual Generation**

Prepared by:

Abdelrhman Abed 1193191

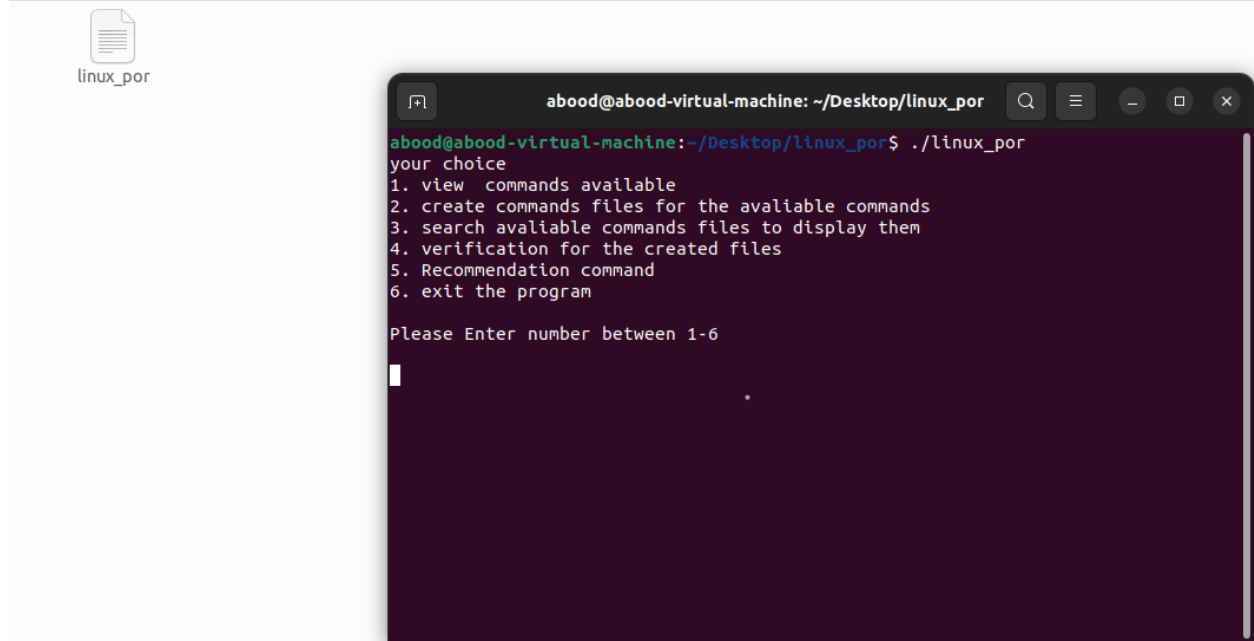

Instructor: Dr. Aziz Qaroush

Assistant: Eng. Ahed Mafarjeh

Section: 4

Date: 3 /1/2024

Program Interface:

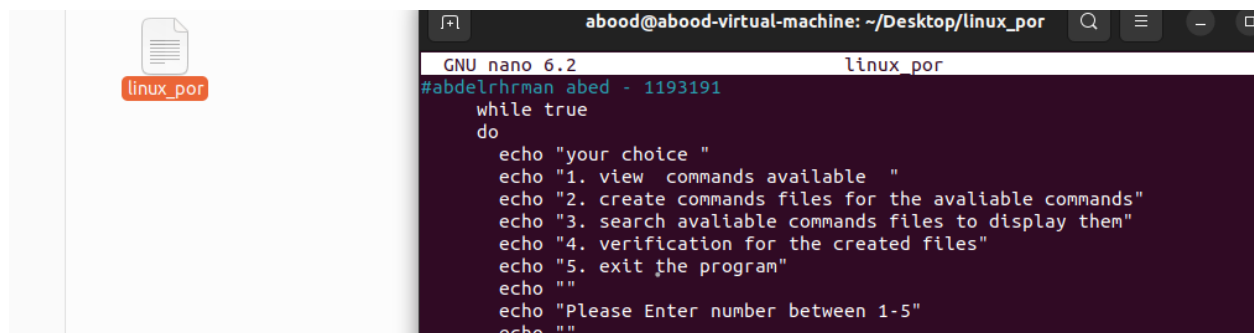

```
abood@abood-virtual-machine: ~/Desktop/linux_por
abood@abood-virtual-machine:~/Desktop/linux_por$ ./linux_por
your choice
1. view commands available
2. create commands files for the available commands
3. search available commands files to display them
4. verification for the created files
5. Recommendation command
6. exit the program

Please Enter number between 1-6
█
```

The user have 6 choices from 1-6 and each choice give different result as shown below when enter number 6 it is exit form program

Note: I using case statement in this code

The Code:

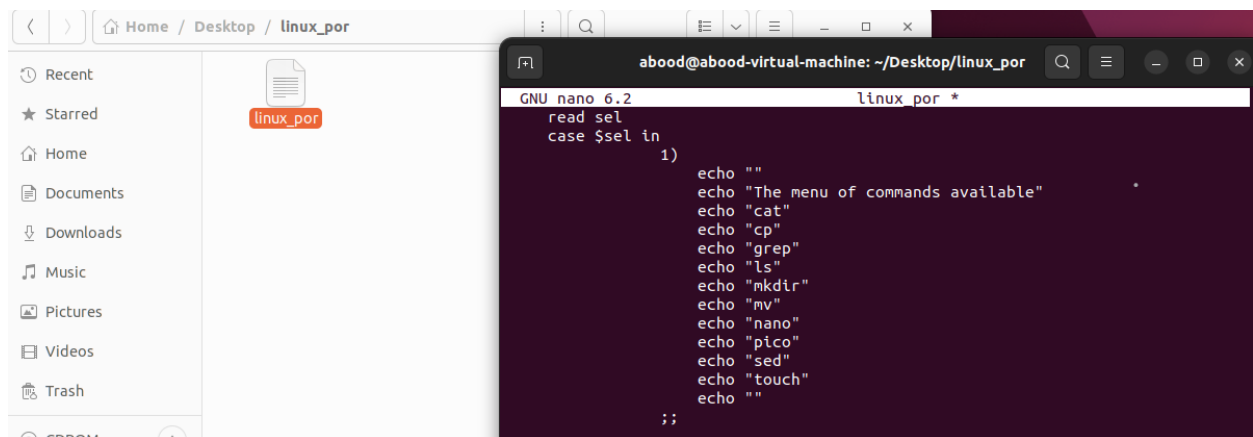

```
GNU nano 6.2 linux_por
#abdelrhman abed - 1193191
while true
do
    echo "your choice "
    echo "1. view commands available "
    echo "2. create commands files for the available commands"
    echo "3. search available commands files to display them"
    echo "4. verification for the created files"
    echo "5. exit the program"
    echo ""
    echo "Please Enter number between 1-5"
    echo ""
```

View commands available:

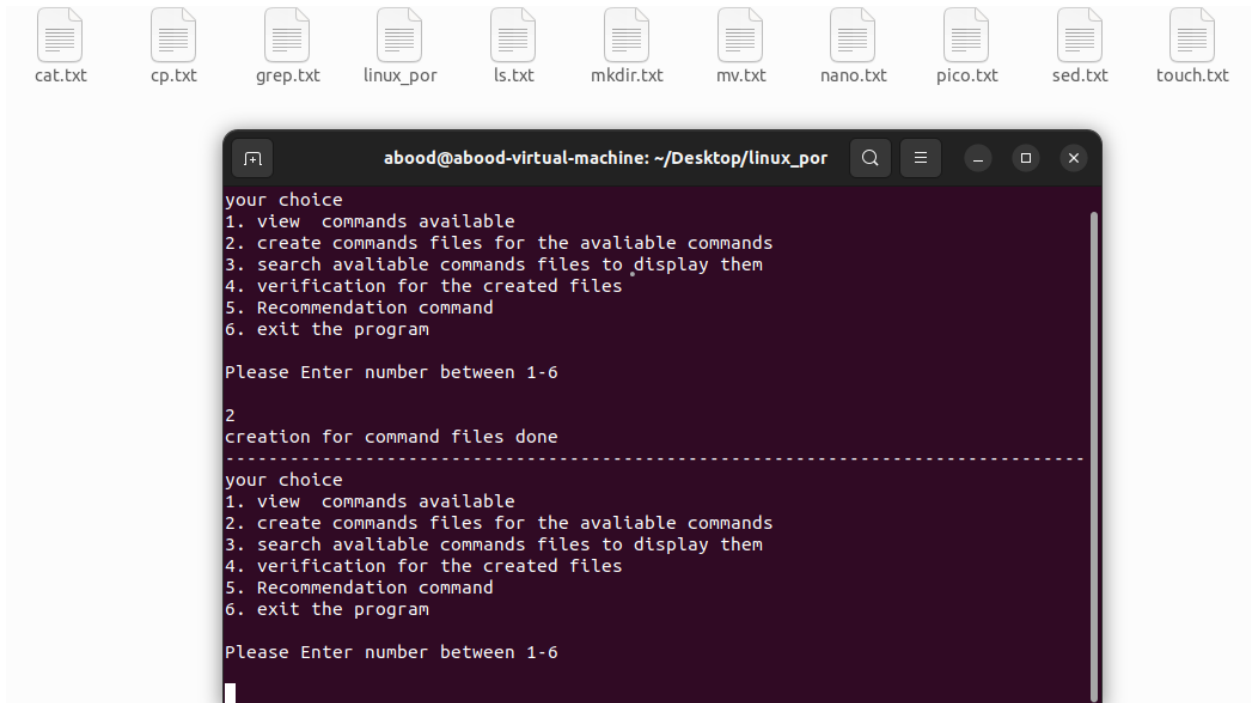

When the first choice is picked by entering 1 (view command available) it will give this result menu of commands (cat , cp , grep , ls ,mkdir ,mv ,nano ,pico ,sed ,touch)

The Code:

Create command files:

When the second choice is picked by entering 2 it will create file.txt for each command and insert in each file.txt (Command Description , Version , Example, Related, Note)
The operation is done automatically

Search

```
Please Enter number between 1-5
3
Enter the command name to search:
enter 0 if you want back to menu
```

When the Third choice is picked by entering 3 you will get a message (enter name command to search) and (enter 0 if you and back)

```
Enter the command name to search:
enter 0 if you want back to menu
s
commands that have s
1  ls
2  sed
```

Here the user can search for a word or letter for example by writing s the program will show the commands have letter s and the user must write the full name of command to display what is in file.txt to apply the command

```

2 sed
Enter the command name to search:
Enter 0 if you want back to menu
sed
-----
Description for sed command:
DESCRIPTION
Sed is a stream editor. A stream editor is used to perform basic text
transformations on an input stream (a file or input from a pipeline).
While in some ways similar to an editor which permits scripted edits
(such as ed), sed works by making only one pass over the input(s), and
is consequently more efficient. But it is sed's ability to filter text
-----
The Version for sed command:
sed (GNU sed) 4.8
Packaged by Debian
Copyright (C) 2020 Free Software Foundation, Inc.
License GPLv3+: GNU GPL version 3 or later <https://gnu.org/licenses/gpl.html>.

Paolo Bonzini, Jim Meyering, and Assaf Gordon.

```

When user write the name of the wanted command the program will display what is in file.txt to command.txt (Command Description, Version, Example, Related, Note)

```

Enter the command name to search:
Enter 0 if you want back to menu
q
commands that have q
No matching command found have q
Do you want to display the suggested command (yes/no)?

```

When user enter or write an unavailable word or letter, do you want to display the suggested command (yes/no) will be given

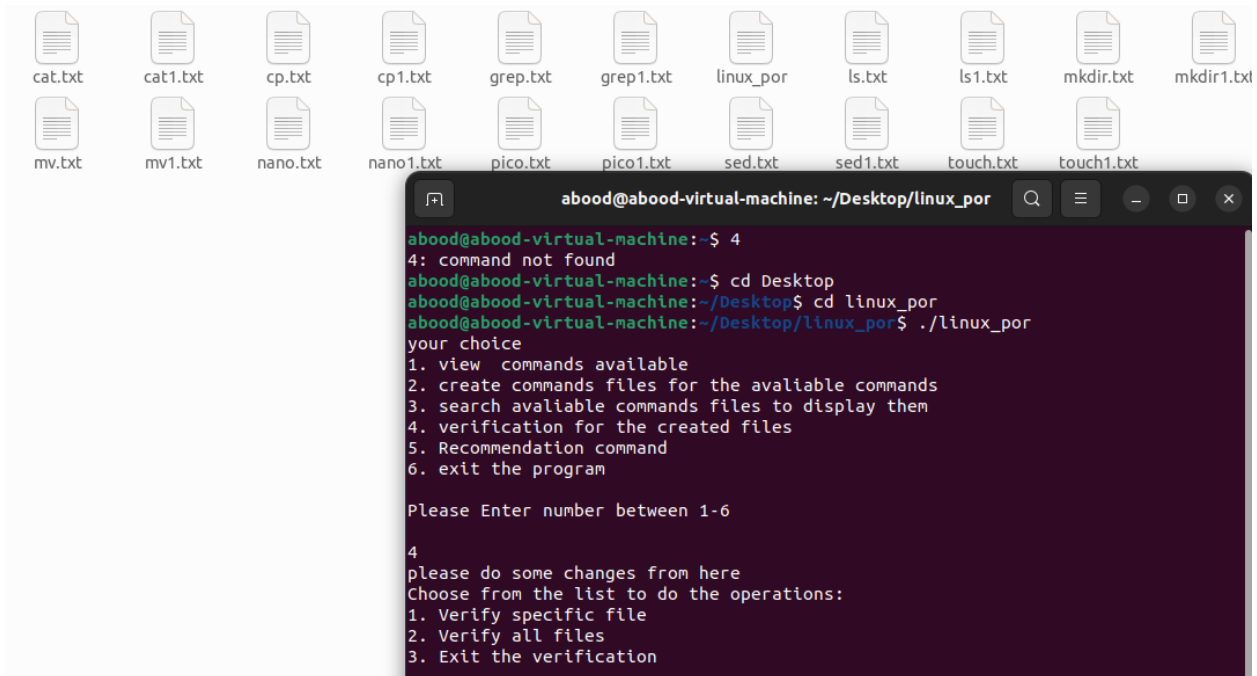

```
commands that have q
No matching command found have q
Do you want to display the suggested command (yes/no)?
yes

cat
cp
grep
ls
mkdir
mv
nano
pico
sed
touch

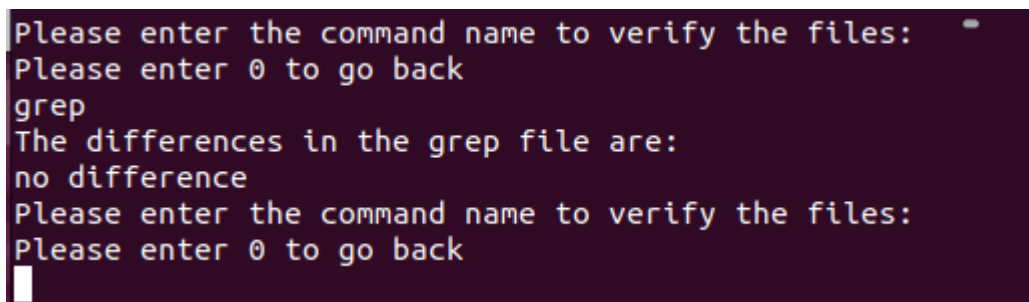

Enter the command name to search:
enter 0 if you want back to meun
```

By answering yes you will get a suggested command but if you chose no you can change the search contact

Verification

When the ford choice is picked by entering 4 menu for verification and will make file1.txt and copy data from file.txt to file1.txt So that we can do a comparison between file.txt and file1.txt in case 1 the verify file and 2 the verify all files

```

Choose from the list to do the operations:
1. Verify specific file
2. Verify all files
3. Exit the verification
2
The changes in the cat file are:
no difference
The changes in the cp file are:
no difference
The changes in the pico file are:
no difference
The changes in the nano file are:
no difference
The changes in the mkdir file are:
no difference
The changes in the grep file are:
no difference
The changes in the mv file are:
no difference
The changes in the ls file are:
no difference
The changes in the touch file are:
no difference
The changes in the sed file are:
no difference

```

No difference because I don't change in thing in original file

```

3
4 Mandatory arguments to long options are mandatory for short options
5 too.
6
7 --backup[=CONTROL]
8 -----
9 The Version for nano command:
10 mv (GNU coreutils) 8.32
11 Copyright (C) 2020 Free Software Foundation, Inc.
12 License GPLv3+: GNU GPL version 3 or later <https://gnu.org/licenses/gpl.html>.

15
16 Written by Mike Parker, David MacKenzie, and Jim Meyering.
17 -----
18 Example for mv command:
19 mv file.txt file1.txt or mv oldfile.txt new file.txt renames oldfile.txt to
20 newfile.txt using ls and grep 'f' to display what is in file The output:
21 oldfile.txt
22 after using mv
23 newfile.txt
24 -----
25 Related for mv command:
26 cp , rm
27 -----
28 Note for mv command:
29 command can be powerful tool for managing files and directories its moving or
30 mv.txt renaming files
31 -----
32 abood

```

The image shows a terminal window with a dark purple background. It displays the output of a script that compares files before and after running various Linux commands. The script uses a case statement to check for differences in files like cat, cp, pico, nano, mkdir, grep, mv, ls, touch, and sed. The output shows that for most commands, there is 'no difference'. However, for the 'mv' command, it reports a difference between 'mv.txt' and 'mv1.txt' at line 32, column 31. The terminal also shows a nano editor window in the background with the contents of 'grep.txt'.

```
no difference
The changes in the mv file are:
no difference
The changes in the ls file are:
no difference
The changes in the touch file are:
no difference
The changes in the sed file are:
no difference
Choose from the list to do the operations:
1. Verify specific file
2. Verify all files
3. Exit the verification
1
Please enter the command name to verify the files:
Please enter 0 to go back
mv
The differences in the mv file are:
Files mv.txt and mv1.txt differ
32d31
< abood
Please enter the command name to verify the files:
Please enter 0 to go back

The changes in the cat file are:
no difference
The changes in the cp file are:
no difference
The changes in the pico file are:
no difference
The changes in the nano file are:
no difference
The changes in the mkdir file are:
no difference
The changes in the grep file are:
no difference
The changes in the mv file are:
Files mv.txt and mv1.txt differ
32d31
< abood
The changes in the ls file are:
no difference
The changes in the touch file are:
no difference
The changes in the sed file are:
no difference
```

When change in file1.txt and run the code the code will show the difference and what the difference and any line and column

Note: I using case statement in this code

Recommendation

The most Commands i use in program

```
./linux_por  
chmod  
nano  
cd  
ls  
man  
./newl  
chmod  
sh  
clear  
rm  
cd  
cat  
history  
cat  
man  
history  
1  
touch  
man
```

```
choice the command to display:  
enter 0 if you want back to menu
```

When the 5 choice is picked by entering 5 will display a most command I used in program you can make search here also if you enter name command not available the a message show command not available you can used a commands (cat , cp , grep , ls ,mkdir ,mv ,nano ,pico ,sed ,touch) to display (Command Description , Version , Example, Related, Note)

The most Commands i use in program

./linux_por

chmod

nano

cd

ls

man

clear

./newl

chmod

sh

cd

rm

cat

history

cat

man

history

1

touch

man

choice the command to display:

enter 0 if you want back to meun

history

command not available history

The command available to Display cat /cp /nano/pico/grep/mv/mkdir/sed/touch/ls

choice the command to display:

enter 0 if you want back to meun
